The Benchmark Publication

Asia Edition (09:30 GMT) 15-November-2024, Volume 1, Issue 117 (Asia)

It's convergence week! Totsa just can't get enough. It gained yet another four convergences today: an Upper Zakum from each of Exxon and PTT, an Al Shaheen from Trafi and an Oman from Phillips. At least we've finally broken free of the Upper Zakums and got some variety in the grades being declared. Totsa just hasn't been able to restrain itself this month. Le rampaging Totsa Taureau threw down his cigarette and baguette and came to try to save the tumbling physical premium this week, bidding and lifting all over the place. Look at how many convergences it's got! 10! That's 5 million barrels. Enough to keep France going for days! But rumour has it they're taking it East anyway...

Rumours continue of ample deliveries destined into the INE where happy go lucky stimulated Chinese bought up the crude contract and happy go lucky foreigners bought Dubai look-alike grades to deliver to the exchange. Happy Buyer and Happy Seller. Looking at our lovely colour coded chart, you can tell Unipec was a bigger seller earlier in the month, but the sellside has become much more fragmented in recent sessions, with PTT, Phillips and Trafi all coming to the fore. Obviously, Exxon's kept up its consistency and has reached 4 convergences to boot. With so many already, it looks like Upper Zakum supplies are running on fumes; we got the first of other grades today: an Oman from Phillips and an Al Shaheen from Trafi. Unipec was still a big seller in the window, hitting plenty of Totsa's numerous bids, though its own offering was limited. In fact, all sellers were smacking bids out of the sky but their own offers were far above where the trading action was going on. Totsa obviously collected a lot of partials, but almost all were their own bids getting clobbered, rather than setting the pace themselves by lifting offers. Equinor was another buyer that got slapped around in the window, along with PetroChina, yet again. And still Exxon sells. The American major must be running dry by this point! Trafi and PTT popped up and secured convergences with the ravenous Totsa. They're all piling in on the French guy, it's not fair ② At least he's got plenty of oil to console himself. Regretting buying so much last month when the physical premium was so elevated by comparison?

In detail

It's a real battle of the continents in flat price again today. Asian trading sank Brent flat price back towards the low-\$71 level but the Europeans woke up and got to work sending it back up again. Will the elastic finally snap today? Post-window choppiness showed that Europe still hasn't made up its mind which way this baby wants to go in the short term. By midday in London, it was even back beyond \$72.30/bbl. But we know where He wants to go really. And what are the Americans going to do later, who knows but the floor looks a bit soft.

The Chinese driver that crude demand growth relied on for so long has had its legs kicked out from under it, as we saw in our recent visit. Even the government is admitting it: China's apparent October oil demand fell 5.4% y/y, according to data from the National Bureau of Statistics, and continues a trend of declines. The country's YTD demand is down just over 4%. No wonder the big forecasters are looking to India for rays of sunshine through the overcast sky of the oil demand outlook.

The Chinese finance ministry announced it will reduce export tax rebates on some refined products, including motor and aviation gasoline, and diesel, from 13% to 9%, from December this year. This is likely to reduce the push to exports and encourage more domestic consumption. But our sources suggest refiners with quotas will still export and margins are good despite the lower tax advantages. If there's ever-lower demand for diesel and gasoline, as we've seen ourselves, it doesn't look like domestic prices will be worth turning down that export margin. Let the trade war begin...

Some Chinese news is very positive. Retail sales in October were surprisingly strong, rising 4.8% y/y, exceeding market expectations of 3.8%. Maybe that flop of a stimulus actually boosted confidence among customers. Alibaba will surely be hoping that strong performance filters through to its earnings, which underperformed market expectations, despite Q3 revenue being up 5% y/y. Internal tourism is also doing well, we can personally say and other sources tell us the same. However, better retail sales haven't yet equated to a recovery in house prices, which fell yet again, down 5.9% y/y in 70 cities. People are still uncertain and not pulling the trigger. That makes October the latest in a series of negative readings since May 2022, except May and June 2023, which printed a 0.1% y/y increase and flat, respectively. To save you, dear reader, the effort of counting: that's 28 months of declines in the past 30 months. Hopefully the tax reductions on property purchases will strengthen the market.

China's industrial production disappointed market expectations of 5.6% y/y growth, printing instead 5.3% y/y expansion. Hey, any other country's leader would take those numbers and say, re-elect me please. Things are slowing down in China, except the EV frenzy. It's not a great outlook for the nation's already struggling diesel demand. Our recent trip to China confirmed the lacklustre construction and overall industrial slowdown which is now filtering through in the data prints. Iron ore didn't like the news and futures slipped 3% today, reaching its low since September. Know the signs and you'll see the deep trouble China's in. The CSI300 fell 1.75% further today, as confidence in the fluffed-up debt repackaging disguised as fiscal stimulus falls flat and repeated data comes through showing weaker than expected performance. With Citi's China surprise index having spent almost 5 months in negativity, it's natural that expectations become ever more pessimistic until consistent overperformance shows itself in data readings.

And somehow Musk has become international diplomat. He met Iran's UN ambassador to discuss the Middle Eastern conflict. He's like a modern-day Rasputin who's infiltrated the American 'royal' family. Maybe a fresh face and new approach will help diplomatic efforts in the Middle East find a resolution to a war we all want to see end. We're hopeful the new US administration will attempt to find a peaceful solution, as it keeps banging on about. Low oil prices, hmm...expect them.
