The **Officials**

The Benchmark Publication

Asia Edition (08:30 GMT) 02-January-2025, Volume 2, Issue 1 (Asia)

Welcome to Volume 2 of The Officials! 2024 was a big year for us, establishing our report and adding numerous key benchmarks, even branching out into crypto and launching our own dollar index – the ODX Asia™. Expect more exciting things in 2025, including our upcoming price discovery for Dated Brent and additional commodities, to be revealed...

With a New Year, do Brent futures have a new lease of life? Asia opened up and pushed us over the \$75/bbl mark for the first time since 25 November. Content with a hard day's work, Asia gradually eased off through the rest of the session, with Brent eventually closing at \$74.77/bbl. However, the foray above 75 laid the foundations for Europe to fire flat price towards \$75.70/bbl at around 10:00 GMT. The mid-70s are back – we just hope the hairstyles don't come back too.

We predicted the market had turned towards the mid-70s on 16 December – watch our analysis here! https://www.youtube.com/watch?v=kaqHXnUGY8A

Totsa wants more. Still. It was, as per usual, the big buyer in the first Dubai window of the year. But this was a minor showing compared to what we've seen for the past few months. BP also made a bid here and there, with one getting a whack from Exxon. But other than that, Totsa was a solitary buyer in 2025's first window. Sellers were just as few and far between as the buyers. Exxon was the most active, hitting most of Totsa's bids. The only other seller to get in on the game was Koch, which made a brief appearance in the final windows of 2024 but was more actively involved today.

Several other buyers and sellers were skulking around the edges but none came close enough to the trading price to get involved in the real action. Reliance and Gunvor were offering, as they have done consistently, while Mercuria and Mitsui kept on bidding. With such a quiet window, the Dubai physical premium eased further from its exceptional late-December strength to \$1.57 today. A far cry from its peak on Monday, but still very juicy.

China looks set to continue its crude buying bonanza, as the stimulus appears to be working – at least in the oil sector.

Summary				
Physical and Futures		02-Jan-25	1-Day Change	7-Day Change
Brent Mar (fut)	(\$/bbl)	74.770	+0.140	+2.190

WTI (fut)	(\$/bbl)	71.380	70.970	70.610

In detail

2025 started with a bang as the first Asian session of the year opened with Brent flat price above \$75 – the first time it's surpassed that point since late November. But it eased off to the close, finally ending at \$74.77/bbl, up by 14c/bbl on the day and WTI gained slightly more, rising 21c/bbl to reach \$71.38/bbl. But the big news of the day in terms of our benchmarks is the collapse of Dubai relative to its rivals. While the European and American benchmarks were climbing, Dubai slid 75c/bbl, down to \$75.20/bbl. Despite this slip, the Dubai physical premium remains chunky, albeit down from its extreme strength late in December, at \$1.57. The most dramatic move was in Dubai partials/ Brent futures. Towards the end of December, Dubai's premium over Brent futures strengthened to \$1.32 on Tuesday but today swung back to 43c.

The CCP and the PBoC have been upping their efforts in order to support the Chinese economy in recent months. Starting in September policy makers in China have released vast stimulus measures, which included 1.7 trillion yuan worth of liquidity injection from the PBoC via reverse repo and government bond purchases in December, helping to offset the record withdrawal via the Medium Term Lending facility. The result was a net injection of about 550 billion yuan. The PBoC have delayed cutting reserve requirement in December, despite a dramatic shift in policy stance for 2025. But the injection boosted liquidity by an amount equivalent to that of a 25-bps cut to the reserve requirement ratio. However, monetary policy stimulus alone won't achieve China's 5% GDP growth in 2025, and the CCP knows this.

Recently the Chinese government has been upping its internal spending too. The government are believed to be granting civil servants upwards of 500 yuan per month in additional pay, and now they are upping their EV purchases as well. The Ministry of Finance on Monday set a goal of 30% EV purchases in new government vehicle procurement. While China boasts 50 major EV producers, only BYD, Li Auto and Aito are profitable. BYD alone sold 509k units in December, which meant a total of over 4.25 million units for the full year in 2024, a 41% increase over 2023. Lia Auto also sold half a million units for the full year in 2024, up 33.1%. In China, your company isn't limited by what it's traditionally done – look no further than Huawei. You probably recognise it as a phone manufacturer, but it sold almost 50k EVs in December too! As China's retail gasoline and diesel are set to rise tomorrow, according to Xinhua, EVs just get more and more attractive.

EVs, however, got a bit of bad publicity yesterday, as a Tesla Cybertruck blew up outside Musk's mate's place. The EV outside Trump's Las Vegas hotel and killed the driver and injured 7 others – which Tesla blamed on a bomb or large firework. 2024 was the honeymoon period for Musk and Trump's relationship. Whether the bromance will last the whole of 2025 is subject to much debate.

Although China's EV industry is firing on all cylinders, the CCP's efforts to ensure the Chinese economy rebounds from its earlier drudgery, it's not going without bump or hiccup. While EV factories are booming, the Caixin Manufacturing PMI for December eased off to 50.5, far down on consensus expectations of 51.7, but above the official NBS PMI last week.

By comparison, India's manufacturing is going strong, albeit with a disappointing print in December, as the HSBC Manufacturing PMI was confirmed at 56.4, disappointing estimates of 57.8. Both behemoth Asian countries have experienced some speedbumps on their stratospheric growth trajectory. And while China's been buying so much crude for the past couple of months, it's also been hoovering up all the iron ore it can get its paws on. China's iron ore imports look set to break a fresh record in 2025. The yuan has been steadily inching lower in the PBoC's daily fixings, and with the rate outlook in China looking pretty doveish, downside potential in the yuan remains high. This means imports will become more expensive as interest rate differentials widen. No wonder Chinese importers are choosing to buy so much iron ore and crude now.

China's construction industry has been collapsing faster than a poorly built tower block in a magnitude 8 earthquake, as cranes stand idle in major cities. So why do they need all this iron? Recall earlier this year when China flooded the global market with cheap steel and put the hurt on European steelmakers. We think China could be gearing up for another bout of the fight.

It's no secret that China's inventories are bulging and warehouses are creaking at the seams with vast stocks. In late December, iron ore stocks were up 28.3% y/y, as steel production takes a nosedive. And yet, despite the wobbles this year, Xi Jinping asserted China is set to hit its 5% GDP growth target this year. Make of that what you will. Given the rising EV penetration and overall economic slowdown, we expect much of China's extra crude buying is heading to storage too.

ADNOC set the OSP for Upper Zakum loading in February at \$73.28/bbl, granting an average physical premium \$1.197. The Officials Dubai assessment saw an average Dubai physical premium of \$1.084 in December, which therefore sees physical Murban hold an 11.3c/bbl average premium over physical Dubai. With the same OSP as Murban, Upper Zakum has the same 11.3c/bbl average premium over the Dubai physical.

On the final day of trading Dubai for February delivery, some partials converged into a physical cargo of Upper Zakum. With the trading occurring at \$75.95, equating to \$1.95 over M2 Dubai swaps, otherwise known as the Dubai physical premium.

Subject: MURBAN OSP AND GRADE DIFFERENTIALS FOR THE MONTH OF FEBRUARY 2025

We are pleased to advise you that the Official Selling Prices (OSP) and Grade Differential for crude oil FOB Abu Dhabi ports and Fujairah loading terminal for the month of February 2025 are as follows:

Type of Crude Oil	February 2025 Crude OSPs	Crude Prices US\$/BBI
Murban	IFAD Murban Singapore Marker 1 st Line Future monthly average during M-2	73.28
Umm Lulu	February 2025 Murban Price Plus US\$ 0.25 per barrel	73.53
Das	February 2025 Murban Price Minus US\$ 0.40 per barrel	72.88
Upper Zakum	February 2025 Murban Price Parity US\$ 0.00 per barrel	73.28

In a month truncated by holidays and thin end-of-year liquidity, average daily volumes traded in December were lower across key futures contracts.

Instrument (bbl)	Feb	Feb % change	March	March % change	April	April % change
Brent Future	272,095,455	-22.73	258,096,409	-13.85	105,423,136	-37.60
Dubai Swap	20,187,227	-15.88	9,187,477	-2.95	3,690,727	6.07
Gasoil Future	46,801,644	-36.27	29,436,575	-16.09	12,091,655	-49.35
Heating Oil Future	61,830,182	-13.17	41,453,818	-3.41	17,163,136	-32.14
RBOB Future	57,748,409	-33.91	33,811,227	-25.05	16,696,727	-26.00
WTI Future	223,136,591	-24.45	148,484,136	-0.87	70,852,545	-41.15

In percentage terms, daily volumes traded in front month Brent futures declined 19% m/m in December. Similarly, m/m declines were seen across gasoil, heating oil, RBOB and WTI futures, as well as Dubai swaps, except for the April tenor.
